CONCEPT

 **BOYUT**[®]
PLASTİK

www.boyutplastik.com.tr

www.alimgrup.com

Established in 1998 by Naser ALİM in Istanbul, ALİM GROUP started its activities in the business of exporting Wood Based Panels (MDF, MDF, Particle Board, Laminate Flooring, Door Panel) to Balkan Countries.

In 2005, it acquired the furniture edge band manufacturer, Boyut Plastik A.Ş.

With the renewal and capacity increase investments made, it brought a different innovation to the sector by introducing the profile wrapping foil (Platinum Series), as well as the production of high quality edge bands, especially in PVC, ABS and 3D categories.

In 2020, Alim Group started to operate its nonwoven fabric production facility investment and to produce in globally accepted standards the main material required for the production of medical masks, which the country needs,

Today, Alim Group carries out its administrative and production activities in its new and modern building with a closed area of 20.000 m² in Istanbul with approximately 400 employees.

Alim Group, which differentiates itself from its competitors and creates its own unique strategies, develops good relations with existing and new business partners at home and abroad, with a dynamism open to innovations, and continues its efforts to reinforce their trust and satisfaction without slowing down.

Alim Group Fields of Activity;

Alim Orman Ürünleri Sanayi ve Ticaret A.Ş.

Distribution of Wood Based Panel for Furniture Production

It is one of the largest wood-based panel (MDF, Particle Board, laminate flooring, doorskin and similar products) wholesalers in Europe with an annual volume of 250 thousand m³, and its main operation area is the Balkans and Southeastern Europe.

Boyut A.Ş.

Production of Furniture Edge Band

Boyut Plastic, which exports half of its production to more than 50 countries, has gained a rapid growth momentum with the investments made in recent years. It aims to further strengthen its position in the market in the coming period by shaping its activities within the framework of the goal of being among the top 5 brands in Europe and the principle of continuous development.

Alim Medikal

Disposable masks, which have become a very important product for our health with the onset of the COVID19 Epidemic, started to be produced within the ALİM GROUP and took its place among the successful brands in the sector with the ALİMEX brand. MELTBLOWN non-woven fabric, which provides filtration and plays the most important role in these products with a high protection rate, is also produced within ALİM GROUP.

We are in the Center of Europe with our products that add value to furniture!

Message from CEO

Being sensitive to occupational health and safety, giving importance to the continuous development and training of our employees are among our priorities. Furthermore, we aim to supply the demand of furniture industry for semi-finished products in order to provide them competitive advantage at the highest level.

The raw material of our success is trust, which came as a result of our superior performance. We have increased our targets every day and have become one of the rising powers of Turkey in the sectors in which we operate.

We aim to further expand our sales geography by exporting to new and profitable markets. We are constantly trying to enrich our product range with our innovative approaches.

We will continue on our way to become a global brand which is equivalent of the "Innovative and Reliable" principles.

I wish healthy days to our valuable business partners with whom we are very happy to work together in the growth and development process.

Best Regards,

Naser ALİM
Chairman of Alim Group and
Foreign Economic Relations Board (DEİK)
Turkey-Montenegro Business Council

With our exports to more than 50 countries, especially to European countries, we are among the growing companies in its sector.

Production of Nonwoven

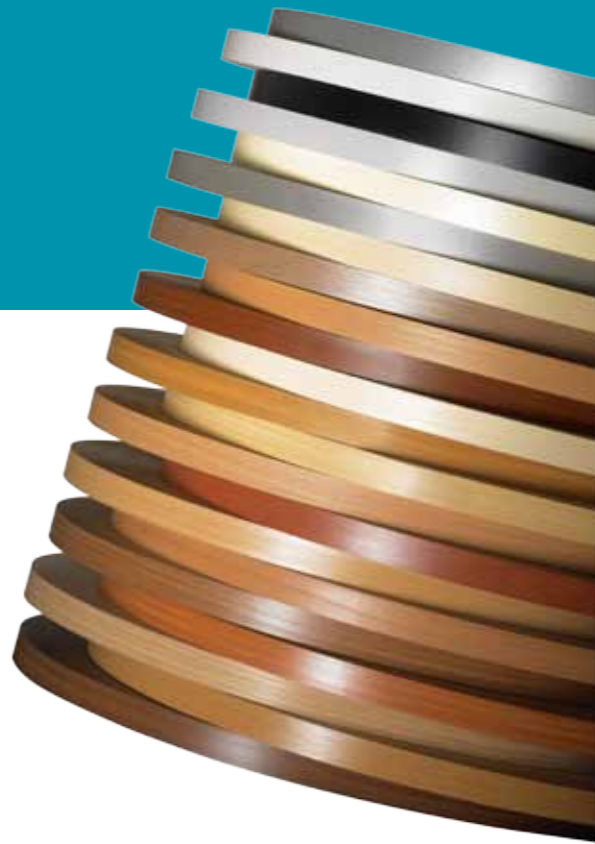

The right choice in edge band applications!

As Boyut Plastik, we manufacture edgebanding, paintable foil and decorative metallized foil products used in furniture and door production in our modern, high-capacity factory in Istanbul.

With its high quality, innovative, environmentally friendly products that add value to furniture, which meets the expectations of all stakeholders at the highest level, Boyut Plastik is advancing towards its goal of further increasing its market share and becoming a regional power.

Manufacturers using edge band products, which are an indispensable part of furniture production, and satisfaction in each link of the marketing chain that delivers these products to the user are our most important motivation source in this path.

Products that meets fully the expectations for Innovative and Competitive Needs!

PVC (Polyvinyl chloride)

Due to its excellent machinability properties, it is the most used material for the manufacture of edge bands for the furniture industry. PVC edgebanding products are popular for modular furniture because of its durability, ease of application and long product lifespan. It has unlimited application areas such as home and office furniture, fair stands, store decoration. Chemically, our PVC formulations are safe as they do not contain harmful substances such as lead-based or other heavy metal stabilizers.

PP (Polypropylene)

It is a semi-crystalline, thermoplastic material. It is a material that stands out with its affordable cost, suitability for industrial production, resistance to heat, UV rays and chemicals. It can be used without problems for small radius curve applications. It has low density, is flame retardant. It has the advantage of being preferred with its environmental sustainability and recyclability feature.

ABS (Acrylonitrile Butadiene Styrene)

It has most of the properties of PVC, but the density of ABS is lower, moreover, it does not contain chlorine in its composition. It decomposes on combustion without producing dangerous fumes and is therefore considered more environmentally friendly than PVC. Although it has a higher cost than PVC, it is preferred in Western Europe with its healthy and environmental features.

PMMA (PolyMethyl MethAcrylate)

PMMA edgebanding is a decorative solution designed and manufactured for 3D edgebanding applications. The surface is applied with a polymer consisting of ultra-transparent acrylic. Because the main ingredient is transparent, it reflects light. In addition to its transparency, PMMA exhibits excellent machinability and impact resistance properties.

The process designed for eye-catching design and high quality production!

One of our strengths is our success in achieving optimum visual and tactile fit between the edgebanding and the sheet. We can make the difference between panel and edgeband almost indistinguishable. With our wide product range in color, pattern, structure and varying gloss levels, we can offer options that are perfectly compatible with all panels.

Solid Color

We follow a careful process, starting with the color of the polymer substrate, to ensure a perfect color match between the board to be applied and the edge band. The base color is an indispensable starting point for the printing process on it. It is produced in a way that is visually compatible with the texture and color of the plate when viewed from the side.

Embossing

Embossing is the physical texture you feel on a surface. On the surface of our edge bands, we pay attention not only to the visual harmony of the wooden texture, but also to the feeling of touch with the wooden surface. We also crown the visual design of our different embossing surfaces and edge bands with tactile harmony.

Printing

From natural wood grains to stone decors and fancy designs, we use many different press rollers in our production facility to find the best solution. We carefully follow new trends in furniture decor developments with leading decor printing companies to keep our cylinder collection up to date.

Polishing

It is the final step in the production of the edgebanding. We can achieve different gloss levels starting with Super Matt to Mirror Gloss and many different levels in between.

2022 Textures Color Chart

We have a wide range of rollers that are perfectly compatible with surface of the boards produced by leading wood-based panel manufacturers. We are in constant communication with panel manufacturers all over the world to be aware of new developments and trends. We are perfecting the visual and tactile harmony of our plain color and printed patterns by producing with our embossing molds that give the texture feeling unique to natural wood and stones and the processes we have developed.

past to the future, to your
living spaces.

PLATINUM *seri*

ABS

Innovative solutions from
today for those who design
the future...

Continuing to develop its product range with innovative approaches, Boyut Plastik has introduced to the market, the "Platinum Series", decorative foil product, which it has developed as a result of long-term R&D studies.

In addition to being a profile wrapping foil, it can also be used as an edge band in furniture, door frames, ceiling crown decoration, skirting boards, wall coverings, frame profiles, cabinet handles, furniture legs, origami feet, edge ornaments and many more applications.

The platinum foil can adhere to the flat surface as lamination, and the lamination process can be done by the panel machine on the profile lines or by cold press.

Produced from ABS material, the Platinum Series is an environmentally friendly product suitable for recycling and does not contain heavy metals.

When the product is burned, no harmful gas is released and it can disappear in a very short time.

Discover your design potential with BOYUT Edgebant solutions...

alimex
CERRAHI MASKE • SURGICAL MASK

In our facility, which we quickly commissioned with the awareness of a national duty during the pandemic period,

We produce high quality nonwoven fabrics...

**What is Meltblown Nonwoven fabric?
Where is it used?**

It is a technical textile product that is produced only for special uses, and has a very low cost compared to its usage time. It is a nonwoven fabric with liquid absorber, liquid repellent, flexible, strong, soft, stretchy, fire retardant, filtering and antibacterial properties. Generally, nonwoven fabrics are produced by reinforcing the fibers in a way that allows them to stay together in any way after being formed into a layer or cheesecloth.

Elastic nonwoven disposable surfaces are used in medicine and hygiene, face mask, patient underpad and baby diapers, surgical drapes, as protective cap, lining and gloves, dust and liquid filtering, anti-slip and in equipment that requires flexibility.
